Software Product Comparison Chart

Turnkey Form Processing Software - Design, Process, Analyze & Report

AutoData® ExpertScan is a simple, turnkey software for gathering and processing information from surveys and other forms, both paper and web. ExpertScan contains form design, processing, data analysis and report creation capabilities. Built-in tools help you easily create scannable and electronic forms, process them with an imaging scanner and/or online, tabulate responses from the automatically collected data, and generate full-color graphical reports.

Automated Data Entry Software – Design & Process

If your main concern is relief from tedious data entry, AutoData® Scannable Office is the right choice. A data processing software that eliminates manual data entry for complex surveys and forms, Scannable Office extracts data from scannable surveys and forms and places it into a new or existing database, for analysis with the statistical program of your choice.
